submission number	poster session	poster number	title
3	3	178	Combining Computational Neuroscience and Body Sensor Networks to Investigate Alzheimer's Disease
4	3	170	Theta Entrainment of Gamma Modules: Effects of Heterogeneity and Non-stationarity
5	3	169	Bifurcation structure of Adaptation versus Depolarization block
8	1	63	Sunk costs account for rats' decisions on an intertemporal foraging task
10	3	154	Improving Data Caching of the STochastic Engine for Pathway Simulation (STEPS)
12	3	164	A computational study of the influence of synaptic cooperativity on synaptic plasticity in a hippocampal CA1 pyramidal cell
15	2	116	Improved conditions for the generation of beta oscillations in the subthalamic nucleus-globus pallidus network
16	1	62	Specifying production times in the ACT-R cognitive modeling system using evoked response potential latency
17	3	150	Exploring the functional implications of brain architecture and connectivity: a multi-simulator framework for biophysical neuronal models
18	3	151	Exploring the functional implications of brain architecture and connectvity: a declarative language framework
19	3	152	A computational study of stochastic mechanisms in dendritic calcium spike generation
20	2	84	Fano factor constancy and scale-invariant sampling in recurrent networks with probabilistic synapses
21	2	83	Decoding in the dark: extracting information from spontaneous activity in primary visual cortex
22	3	175	Dynamics of neuromodulatory feedback determines frequency modulation in respiratory network
23	3	172	Exploring the relationships between neuronal parameters and network activity
24	3	148	Inhibitory interneurons enable sparse code formation in a spiking circuit model of V1
25	2	90	Reinforcement learning of 2-joint virtual arm reaching in motor cortex simulation
27	2	65	Cellular and Nuclear Morphology…and Calcium Signaling: Revealing the Interplay between Structure and Function
30	1	53	Synchronizing and desynchronizing effects of nonlinear delayed feedback deep brain stimulation in Parkinson's disease

31	1	56	Role of morphological changes in newly born granule cells of hippocampus after status epilepticus induced by pilocarpine in hyperexcitability
33	1	33	Charge balanced control of seizure like activity in a two dimensional cortical model
34	2	97	Spike Train Distance Metric Reveals Plasticity in Discrimination of Salient Calls by Putative Excitatory Cells of the Auditory Cortex
35	3	143	Modeling realistic extracellular spiking activity in populations of neurons for the purpose of evaluating automatic spike-sorting algorithms
36	2	126	Cell Assembly Detection with Frequent Item Set Mining
37	3	165	Geometric analysis of soft thresholds in action potential initiation and the consequences for understanding phase response curves and model tuning
38	1	50	Modeling Dose-dependent Temperature Responses to Methamphetamine
39	1	42	A declarative model specification system allowing NeuroML to be extended with user-defined component types
40	3	156	Determinants of associative memory performance in spiking and non-spiking neural networks with different synaptic plasticity regimes
41	3	186	Voltage oscillations and response dynamics in a model of sensory hair cells
42	2	71	Amplitude modulated photostimulation for probing neuronal network dynamics
44	3	130	STDP encodes oscillation frequency in the connections of recurrent networks of spiking neurons
45	2	111	Individual Gain/Loss Attitude, Conditional Cooperation, and Random Shifting in a Public Goods Game
46	2	86	Slope-based stochastic resonance in phasic auditory brainstem neurons based on realistic models of channel noise
47	3	167	Synchronization of entorhinal cortex stellate cells
48	3	189	Chaotic dynamics as a possible mechanism of rapid change of hippocampal local field activity between theta rhythm and large irregular activity
50	2	113	Modeling the Chemical Dynamics of Chloride Ion Indicators
51	1	3	Model of a Sparse Encoding Neuron
52	2	82	Neural mechanism of binding amplitude information of echo sound with its frequency one in echolocating bat
54	3	146	Adaptation shapes spike train correlations: theory and applications to tinnitus
55	1	4	Modeling Cuttlefish Behavioural Chromatophore Response
56	3	168	Dysfunction of cross-frequency phase-phase coupling in primary dysmenorrhea: a resting magnetoencephalographic study

57	1	48	A neuromechanical computational model of spinal control of locomotion
58	2	98	Heterogeneous short-term plasticity enables spectral separation of information in the neural spike train
59	1	49	Modeling [Ca2+]o- and [K+]o-dependent oscillations in spinal Hb9 interneurons
60	2	107	Low-frequency EEG correlates of fMRI in the resting state
61	1	38	Modeling Na+- and Ca2+-dependent mechanisms of rhythmic bursting in excitatory neural networks
62	2	105	Behaviour Informatics: data integration for greater understanding of human and animal behaviour
63	3	174	Fixed point topology and robustness to perturbations between pairs of coupled neurons
64	3	128	Turing instabilities in a mean field model of electrocortical activity
65	3	135	An agent-based approach to multi-scale neuronal network simulations using modified McCulloch-Pitts neurons
66	2	70	Paw-shake response and locomotion: Can one CPG generate two different rhythmic behaviors?
68	3	187	Modeling study of a Central Pattern Generator in the Melibe seaslug
69	1	29	Computational Modeling of Light Activated Ion Channels
70	2	110	Lethality of Complex Neuronal Network in Caenorhabditis elegans Nervous System based on Cell Attacks
71	2	108	Data driven analysis of low frequency spatio-temporal dynamics in resting state MRI (rsMRI) data
72	1	39	Analysis of excitatory and inhibitory interactions at high temporal resolution in core circuits of the respiratory CPG
76	1	43	Motif statistics and spike correlations in neuronal networks
77	1	10	Features of chaotic activity in a balanced network of Type II neuronal oscillators
78	2	76	Effects of synaptic connectivity inhomogeneities for propagation of activity in neural tissue
79	2	75	Evaluation of target search efficiency for neurons during developmental growth
84	3	185	On the trade-off between single-neuron complexity and network size with respect to spike-timed computations
85	2	74	Classification and visualization of neural patterns using subspace analysis statistical methods
86	3	134	Structure of the Afferent Terminals in the Terminal Ganglion of a Cricket and Persistent Homology
88	3	183	Video Compressive Sensing for Dynamic MRI
90	2	89	Classification of vocalizations by recordings from the auditory midbrain
91	1	30	Genesis of interictal spikes in the CA1: A computational investigation

93	1	32	STDP induced synchrony in inhibitory neural networks: Theory and Experiments
94	1	7	Statistics of natural scene structures and scene categorization
95	3	155	Benchmarking Drosophila receptor neurons for technical applications
96	1	9	A visual code book--structured probability distributions in natural scenes
97	1	16	General anaesthetics induce tonic inhibition and modulate the gain of neural populations : a modeling study
99	2	93	Modeling predicts that parameters shaping action potentials and synaptic responses differ in pyramidal neurons of the visual and prefrontal cortices
100	1	35	Fractal-based linear model of resting state hemodynamic response in fMRI
101	2	87	GPU Facilitated Unsupervised Visual Feature Acquisition
103	2	66	A compartmental model of an identified Drosophila larval motoneuron for investigating functional effects of ion channel parameters
105	2	115	Modeling frequency-dependent action potential failures in CA3 pyramidal cell axons
106	1	18	Action Recognition Using Natural Action Structures
107	3	181	Inverse stochastic resonance induced by ion channel noise
109	2	123	Gamma band LFP in mouse barrel cortex is coupled to respiratory rhythm
110	1	2	Information theoretic and machine learning approaches to quantify non-linear visual feature interaction underlying visual object recognition
111	3	144	Simplified model of the frequency dependence of the LFP’s spatial reach
112	2	95	Interpretation of seizure evolution pathways via a mean-field cortical model
113	2	94	What can be learned from high-resolution sleep data using ECoG
115	3	149	Computational Neuroscience Ontology: a new tool to provide semantic meaning to your models
116	2	100	Conductance interaction identification by means of Boltzmann distribution and mutual information analysis in conductance-based neuron models
117	1	17	Optimal Information Encoding for Multiple, Simultaneously Presented Stimuli
118	3	153	A computational study on the spatial correlation of granule cell firing in the cerebellar cortex
119	1	5	Temperature-fastened Sodium inactivation accounts for energy efficient cortical action potentials in mammalian brains
120	1	6	Properties of cortical axons for energy efficient cortical action potentials

122	1	46	Dendrites equip neurons with a range of resonant frequencies
124	3	159	A computational model of posterior parietal circuits during decision making and sequential planning
125	2	99	An Open Architecture for the Massively Parallel Emulation of the Drosophila Brain on Multiple GPUs
126	2	101	A minimal model for a slow pacemaking neuron
127	1	57	Automated model optimization to study spike shape modulation in Layer 2/3 cortical pyramidal neurons
128	3	141	Coding, stability, and non-spatial inputs in a modular grid-to-place cell model
129	3	133	A biophysically realistic computer model of Alzheimer pathology to guide the development of symptomatic drugs
130	1	55	Biologically realistic excitatory and inhibitory cell properties emerge from a sparse coding network
131	1	22	Brain ventricle volume correlates with effortful control in healthy young males
132	2	114	Individual differences in temperaments traits and complex network properties of fMRI
133	2	117	Dynamics of large-scale neuronal networks of the human cortex functional connectivity
134	3	129	Convergence analysis of efficient online learning in Bayesian spiking neurons
135	3	127	Comparing the spatio-temporal organization of joint spiking and local field potential oscillations in motor cortex
136	3	132	Variations in spike times
137	2	103	Encoding of touch location and intensity by neurons of the medicinal leech Hirudo medicinalis
138	2	118	Adaptive Control of 2-wheeled balancing robot by two hemispheric cerebellar neuronal network model
139	3	145	Axonal anisotropy and connectivity inhomogeneities in 2D networks
140	1	11	Synaptic activations of neuronal populations in the thalamocortical loop from LFP using kCSD and ICA
141	1	13	A high-level, simulator independent, Python library for simulating small networks of multicompartmental neurons
142	2	124	Bistable persistent spiking of layer II and layer V medial entorhinal cortical neurons during theta frequency oscillations in vitro
143	2	122	Neuronal avalanches and the cortico-striatal network
144	2	79	The influence of network structure on neuronal network dynamics
145	1	59	A model for dynamical switching in tristable perception for visual plaids
146	1	60	Divisive feedback can underlie phasic firing but is precise coincidence detection adequately robust?

147	3	138	Ionic mechanisms of action potential propagation velocity changes in peripheral C-fibers. Implications for pain
148	2	88	Theory and simulation of synaptic amplification by dendritic spines
149	3	147	Taming the model zoo: A unified view on correlations in recurrent networks
150	1	51	A closed model for the respiratory system in mammals
151	1	54	Mechanisms of pathological synchrony in Parkinson's disease induced by changes in synaptic and cellular properties due to dopamine
152	3	162	Understanding plasticity of chemotaxis in C. elegans, a computational model of associative learning
153	1	61	Local field potentials in the auditory brain stem described by idealized biophysically-based models of the medial superior olive
155	1	58	The role of electrical coupling in the decision to initiate swimming in young frog tadpoles
156	3	163	Size matters: modeling the effects of body shape on locomotive behavior in the nematode C. elegans
157	1	1	Spike-Timing Dependent Plasticity Facilitates Excitatory/Inhibitory Dysbalances in Early Phases of Tinnitus Manifestation
158	2	77	Resistance between channels may lead to increased action potential efficiency
159	1	40	A model for simulating Local Field Potential in the thalamus of Essential Tremor patient during deep brain stimulation.
160	1	52	Can a central pattern generator produce multiple motor patterns? Modeling scratch rhythms in turtle
161	1	34	Critical slowing in a Hodgkin-Huxley neuron near spiking threshold
163	3	136	What Does Weber's Law tell us about Spike Statistics?
164	3	157	Bistability of seizure-like bursting and silence
165	3	158	Homeostatic regulation in a single neuron model from the Pre-Bötzinger Complex
166	2	91	CPP alters theta/gamma oscillations in rat hippocampus: simulation and experiment
167	2	112	Background firing rate affects the signal transfer of behavior locked input patterns from Purkinje cells to the cerebellar nuclei
168	2	80	Ih modulates theta rhythm and synchrony in computer model of CA3
169	3	140	Cooperative effects of nonlinear dynamics and noise at tonic-to-bursting transitions
171	1	47	Modeling the effects of molecular crowding on cerebellar long term depression
172	1	44	Speed and Accuracy in Decision Making: Input correlations and performance
173	1	8	Statistics of eye movements in scene categorization and scene memorization

175	2	104	Automated quantification of optokinetic responses based on head-movement
176	2	68	Effect of intrinsic membrane conductances on Phase Resetting Curves in a conductance-based neuron model
177	1	41	Using model databases to determine dendritic distributions of Ih channels in oriens-lacunosum/moleculare hippocampal interneurons
178	1	21	A talkative Potts attractor neural network welcomes BLISS words
179	3	166	Spatial Processing in Binocular Rivalry
181	3	142	Cav3-KCa3.1 complex enhances detection of facilitating parallel fiber inputs in cerebellar Purkinje cells
182	3	160	Dorsal parietal area 5 only encodes the immediate reach in sequential arm movement
183	2	92	Determining information flow through a network of simulated neurons
184	1	15	Haloperidol effects on striatal dopamine and DOPAC levels and subcellular distribution
186	1	27	Optical imaging of motor cortical activation using functional near-infrared spectroscopy
187	2	109	Testing entropy-based search strategies for a visual classification task
191	2	67	Reducing the maximal calcium conductance in models of the pyloric network after decentralization prevents recovery
192	3	161	Compromise revisited: inhibitory synapse and electrical coupling effects on bilateral phasing in the leech heartbeat system
193	2	72	Influence of inhibition on encoding vocalizations in the mouse auditory midbrain
195	1	28	Derivation of the evolution of empathic other-regarding social emotions as compared to non-social self-regarding emotions
198	2	69	Investigating synaptic plasticity in the crab Cancer borealis pyloric circuit and in a computational pyloric model network database
199	1	12	Spike threshold dynamics reshape the phase response curve and increase the degree of synchronization among neurons coupled by excitatory synapses
200	2	96	Optimal Neural coding in networks of heterogeneous neurons
201	3	180	A temporal model of neural activity and VSD response in V1
204	1	36	NeRvolver: A computational intelligence-based system for automated construction, tuning, and analysis of neuronal models
205	1	14	Signal analysis of whole-body shortening behavior in Hirudo verbana
206	1	37	Analyzing conductance correlations involved in recovery of bursting after neuromodulator deprivation in lobster stomatogastric neuron models
207	3	179	Synergetic role of inhibition and excitation in bursting synchronization
208	1	23	A new algorithm for the resting-state fMRI data sets

209	3	184	Group Sparse Coding with a Collection of Winner-Take-All Networks
210	1	24	Dynamic Bayesian network modeling for intervention mechanism
212	3	182	Cessation of seizure-like oscillations by periodic stimulation in a neuron model with dynamic ion concentrations
213	1	19	Variability of inter-syllable gaps challenges the branched-chain model of sequence production in Bengalese finches.
214	2	121	From spinal cord to hippocampus: links between bifurcation structure, ion channel expression, and firing patterns in a variety of neuron types
215	1	25	Coherent spontaneous resting EEG of frontal regions in human brain
217	1	26	Maximum spanning tree of whole-brain network layout
218	2	106	Detecting Vibration Source for the Orientation Behavior of Sand Scorpions
219	2	119	Reaction-Diffusion Modeling in the NEURON Simulator
220	2	64	Phase-locking, quasiperiodicity and chaos in periodically driven noisy neuronal models: a spectral approach
221	2	102	Impulse dynamics of coupled synchronous neurons
224	3	137	Tracking a trajectory of a moving stimulus by spike timing dependent plasticity
225	3	177	Neuronal transmission of timing precision: dependence on intrinsic and synaptic properties
228	1	45	A simple mechanism for higher order correlations in integrate and fire neurons
229	3	139	Pattern variability in a computational model of respiratory rhythm generation
230	2	120	Same ion channel populations and different excitabilities: Beyond the conductance-based model
231	3	176	Multiscale modeling with GENESIS 3, using the G-shell and Python
232	1	31	Computational Modeling of Light Activated Ion Channels
233	1	20	Tracking sub-syllabic features in zebra finch song during development
236	2	81	Modeling and prediction of conduction delay in an unmyelinated axon
237	3	173	Methodology for extracting activity from functional calcium imaging data
238	2	125	Investigation of bursting patterns in a Hindmarsh-Rose type three cell network via Electronic Circuits
240	3	188	Phase-lag return mappings for a 3 cell multifunctional central pattern generator
241	2	85	Temperature dependent transitions in excitability predicted by an electrodiffusion model of membrane potential
242	2	78	Bifurcation structure of phase locked modes in Type I excitable cells based on phase and spike time resetting curves

243	3	171	Analysis of Input-Output Relationships of CPG Elements and Their Contributions to Rhythmic Output
244	3	131	Eye contact, a fundamental building block of social behavior, engages single unit activity in the monkey amygdala
